EDUCATION

Amity University

Bachelor of Computer Applications (BCA)

July 2023 – Present

Shahid Bhagat Singh Inter College

Higher Secondary School Science – 72.6%

2018 – 2020

EXPERIENCE

Freelance Full Stack Developer

April 2026 – July 2026

Libro: Library Seat Management System (Client Project)

Remote

[Live Demo](#) | [Frontend Repo](#) | [Backend Repo](#)

- Built and delivered a full-stack library seat management platform for a client, automating manual seat allocation and reducing seat availability lookup time from 15+ minutes to seconds.
- Implemented role-based access control (Admin, Student, and Guard) using JWT authentication, bcrypt-hashed passwords, and HTTP-only cookie-based sessions.
- Designed a QR code-based attendance system for guards using html5-qrcode, automatically marking attendance and recording entry logs for each scan.
- Integrated Razorpay payment gateway for online seat booking with auto-generated downloadable receipts and ID cards.
- Built an admin dashboard displaying real-time metrics, including daily and monthly revenue, occupancy rate, attendance, pending approvals, and membership expiry alerts.
- Implemented production-ready security measures, including rate limiting, Helmet, CORS, input validation, and OTP-based email verification.

CERTIFICATIONS

Full Stack Web Development – Prepleaf by Masai

2023 – 2024

1-Year intensive MERN program: JavaScript, React, Node.js, Express, MongoDB

PROJECTS

DevTinder: Developer Connection Platform | React, Redux Toolkit, Tailwind, Node.js, Express, MongoDB, JWT

[Live Demo](#) | [Frontend Repo](#) | [Backend Repo](#)

- Built a full-stack developer networking platform using the MERN stack, enabling users to send, receive, accept, and reject connection requests with JWT authentication and HTTP-only cookie-based sessions.
- Implemented client-side (React), API-level (Express), and schema-level (Mongoose) validation to ensure data integrity before storing data in MongoDB.
- Built a paginated developer feed with connect/ignore actions, filtering out already-connected, requested, and ignored users.

AjxShop: E-Commerce Cart Application | React, Redux Toolkit, Tailwind, FakeStore API

[Live Demo](#) | [GitHub Repo](#)

- Built a responsive e-commerce frontend in React using the FakeStore API, with product search, category, price, and rating filters, and price-based sorting.
- Implemented a debounced search feature to filter products by title, reducing unnecessary search operations while typing.
- Managed cart and wishlist state using Redux Toolkit, supporting add/remove items, quantity updates, and automatic total price calculation.

TECHNICAL SKILLS

Languages/Core: JavaScript (ES6+), HTML5, CSS3

Frontend: React.js, Redux Toolkit, Tailwind, Bootstrap, React Router

Backend: Node.js, Express.js, REST APIs

Database: MongoDB, Mongoose

Auth & Security: JWT, bcrypt, HTTP-only cookies, Helmet, CORS, Express Rate Limit

Tools & Platforms: Git, GitHub, Postman, Razorpay, Cloudinary, VS Code
